

## **2012 - The Movie: Fact or Fiction?**

The newly released movie, 2012, is full of disasters, special effects, feats of superhuman capacity, and especially ugly world politics. It took quite a lot of searching to come up with a vision of what most Mayans see as the end of the world “as we know it.” The movie itself was mildly entertaining, particularly the special effects, which were probably the movie’s only salvation. The cast and acting were nothing spectacular, save for Woody Harrelson, who played a hippie pirate-radio broadcaster with an obsession for government conspiracies, environmental calamities and earth disasters.

But how much of the movie was based on fact? When we look at the state of the planet right now, we are experiencing far more earthquakes and tsunamis of a scale not known before in modern history. We are observing and experiencing climate changes that are affecting the Earth’s very core and structural integrity. We are seeing coastal areas that are succumbing to the effects of rising waters and high-grade hurricanes. It is not difficult to imagine that the Earth may soon be unable to sustain life due to the environmental degradation and overpopulation that have taxed and weakened infrastructures.

Additionally, it is not difficult to imagine our politicians and world leaders fending for themselves and leaving the rest of us out to pasture during a global emergency. They’ve already done so during local emergencies and have yet to be held accountable for not using our tax dollars to care for our failing infrastructures and the people who have put them in power. So in all likelihood, if there is a global emergency, we will either not hear about it or will be hung up wet to dry of our own accord.

Interestingly, many psychics, channelers, and even scientists have foreseen some of the coming earth changes. Channelers have drawn earth-change maps showing new coastlines and continents. Immanuel Velikovsky, referenced in the movie, was one of the first to propose the earth displacement theory. Other scientists have duly noted that Yellowstone Nat’l Park is a disaster just waiting to happen. And if animal behavior is any indication, then there are changes coming that will certainly impact our lives since some animals in Yellowstone have left their breeding and feeding grounds.

Personally, I’ve had reoccurring dreams for the last 20 years of floods in the SF Bay area. I’ve seen the Peninsula having major disasters along the coastline and losing parts of Hwy 101, which runs down the SF Bay adjacent to bayfront areas that have been compromised by landfill and development. I’ve seen Hwy 101 near Moffett field flooded and have had further dreams of canoeing through the downtown area of San Mateo, while waiting for the water to recede.

It’s useless to think of building numerous arcs large enough to hold all of the world’s populations since the money to build must come from somewhere. Our tax dollars do not benefit us; they benefit only the wealthiest of the world’s population, a fact that was made perfectly clear in the movie. If there is a way to survive, only the rich will be privy to the information.

For the rest of us, we will need to move inland, most likely starting NOW, and begin to prepare for our basic survival needs. On the other hand, the Mayas never said we'd go out in a disaster, and since history shows that civilizations rise and fall, it is possible that we are on the brink of a new civilization with help from unexpected visitors. It's happened before and it can certainly happen again.

Regarding the natural disasters, the Earth, with the rest of our solar system, is currently moving through a cosmic photon belt which is going to change our entire solar system and not just our one planet. So any disasters and changes to our planet are sure to affect our entire solar system. Because the Mayas tie their belief systems to galactic cosmology, this is most likely the message that they were attempting to convey. What will occur once we come out of the dark night will most likely be akin to an evolutionary leap of consciousness, which may or may not have physical ramifications. Stay tuned, as we will all certainly learn our fate in a few more years.
